

Residential Gateway in the context of a Managed Home Area Network

Jacques BRUYNEN – Philips Netherlands

Combined Personal Multimedia Communication - and Multimedia Content Delivery Services*, built around the Residential Gateway

Jacques BRUYNEN – Philips Netherlands

*In this prototype –which was presented at IBC2005- the main two types of MediaNet services are demonstrated: Personal Multimedia Communication (PMC) and Media Content Delivery (MCD). SIP-based Voice-over-IP (PMC service) runs concurrently with a DVB-IPI broadcast (MCD service).

This set-up validates the role of the Residential Gateway in areas like QoS, Security and Ease-of-Use.
