

# E-Voting over Heterogeneous Terminals

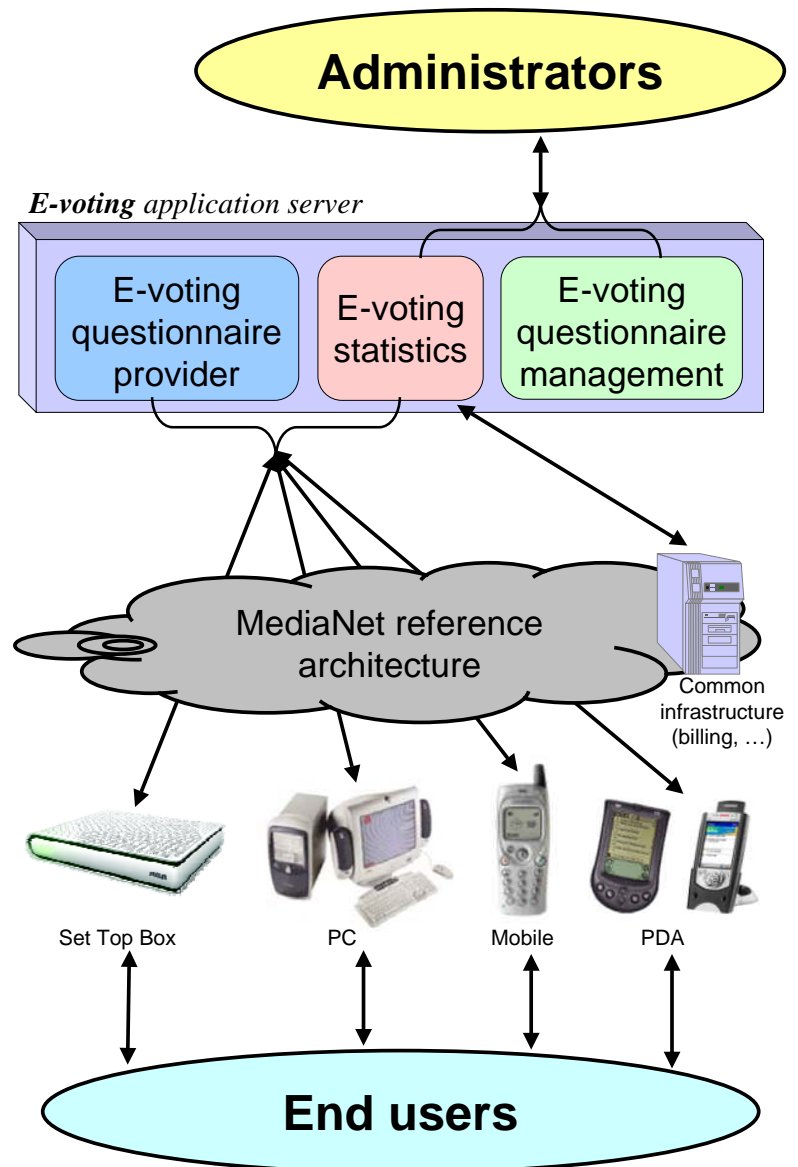

Manuel CHRISTOPHE / Frédéric CHALANÇON – Thomson Telecom

## Application Area:

Unified e-voting system for all IP TV applications (VOD, Games,...) to address many different end user devices

## Features:

- E-voting is available from PC and STB
- User can choose to enable/disable the e-Voting option
- Questions are synchronized with video contents
- The votes can be free or charged
- It is possible to keep secret the results in order to not influence other people
- Number of votes and average are computed

## Advantages of the E-voting solution:

- Content synchronized questions
- Address all kind of devices
- Get immediate feedback from end users
- User can choose what happened in a multiple scenario film
- Advise end user with most liked contents
- Lottery and money games (share money between good forecast on sport events)
- Advanced statistics
- And much more...*
